INTRODUCTION

On average, children are expected to complete one reasoning question every 30 seconds in an Eleven Plus exam. As your child works through this book, you should see their times decrease and their accuracy increase so that they are able to achieve this.

By working through these exercises, children become more familiar with the alphabet (working both forwards and backwards) and therefore see a dramatic increase in their speed. In class, we will work through a selection of these exercises in order to improve your child's exam techniques. We recommend completing one or two sections a day and timing each one. Your child can work through corrections once the timer has stopped. You can download a score tracker from bit.ly/KinLearning-ScoreTracker to help you to monitor your child's times.
